

3-RING MAGNETIC ANTI-GRAVITY SUPPORT

ABSTRACT OF THE DISCLOSURE

5 An apparatus for providing support between a first structure and a second structure is described. The apparatus includes a first section and a second section. The first section has a first group of at least one magnetic frame member, and is coupled to the first structure. The second section has a second group of at least one magnetic frame member, and is coupled to the second structure. The first and second sections present magnetic force therebetween.
